

D Style Standardization Prompt

Style Standardization Prompt

You are a writing assistant specialized in editing academic writing. I will give you a student's research idea and an idea template. Your task is to edit the student's idea to follow the template's format.

Student idea: (Insert the student's idea here)

Template: (Insert the template idea here)

Make sure that you only edit the wording and formatting, including things like punctuation, capitalization, linebreaks, and bullet points. Also make sure to edit any informal wording and phrasing to use vocabulary that sounds like the template's writing style. No other changes are allowed beyond these.

The main sections should be indexed clearly without indentation at the beginning. The title section does not need indexing; other sections, including problem statement, motivation, proposed method, step-by-step experiment plan, test case examples, and fallback plan, should be indexed 1 to 6. Each section can then have sub-bullets for sub-sections if applicable. Leave an empty line after each section.

You should use tab as indentation and make sure to use appropriate nested indentation for sub-bullets. All bullets should have a clear hierarchy so people can easily differentiate the sub-bullets. Only leave empty lines between sections and remove any extra line breaks. If many bullet points are clustered together in a paragraph, separate them clearly with indentation and appropriate bullet point markers. Change to a new line for each new bullet point. For the fallback plan, do not list a bunch of bullet points. Instead, condense them into one coherent paragraph.

For line breaks, avoid Raw String Literals or Double Backslashes when using "\n", and change them to spaces or tabs.

For in-line citations, if the citation mentioned the author's last name (like "(Si et al., 2023)" or "(An et al., 2024)"), you should keep them there; but if the citation is just a number (like "[1]" or "[3,4,5]"), you should just remove it and do some necessary rephrasing to make the sentence still sound coherent without the references.

Apart from minor rephrasing and changing formatting, do not change any content of the idea. You must preserve the exact meaning of the original idea, do not change, remove, or add any other details. Do not drop any sections (including test case examples). Do not rename any models, datasets, or methods. Do not drop clarification or examples in brackets and do not drop any data source mentions (e.g., Chatbot Arena or Wildchat)! Note that when indexing test case examples, each test case example could have multiple steps of inputs and outputs and you shouldn't give separate indices to them. Each test case example should be a whole set of input-output pairs for the baseline(s) and proposed method.

For the proposed method section, avoid any big changes. If the section comes in as a coherent paragraph, you don't have to break it down into bullet points. If the section is already in bullet points, you should keep it that way. If the section is a mix of both, you should keep the bullet points and the coherent paragraph as they are.

Keep all the clarification and examples mentioned in all the sections and do not remove any of them (including those in brackets).

For model selection, if any version of Claude is mentioned, change it to the latest version of Claude (Claude-3.5); if any version of LLaMA is mentioned, change it to the latest version LLaMA-3. Do not make any other model changes. Now directly generate the edited student idea to match the format of the template.

E Idea Review Form

We use the following review form to elicit reviews from all expert reviewers. Reviewers have one week of time to finish each review.

1. Name

2. Institution

3. Email

4. Consent

5. Honor Code: I confirm that I will not use ChatGPT, Claude, Gemini, or any other AI tools when writing my reviews.

6. Familiarity: Before reviewing the idea, please indicate how familiar you are with the given topic on a scale of 1 - 5 (this is just for us to understand potential confounders).

1. You have never read about this topic before
2. You have read at least one paper on this topic
3. You have read multiple papers on this topic but have not published any paper on it
4. You have co-authored at least one paper on this topic
5. You have co-authored multiple papers on this topic or have published at least one first-author paper on this topic

7. Experience: Have you reviewed for major NLP or AI conferences before (e.g., *ACL, COLING, NeurIPS, ICLR, ICML, AAAI)?

8. Full Research Idea Proposal

9. Novelty Score: Whether the idea is creative and different from existing works on the topic, and brings fresh insights. You are encouraged to search for related works online. You should consider all papers that appeared online prior to July 2024 as existing work when judging the novelty.

1. Not novel at all - there are many existing ideas that are the same
- 2.
3. Mostly not novel - you can find very similar ideas
- 4.
5. Somewhat novel - there are differences from existing ideas but not enough to turn into a new paper
6. Reasonably novel - there are some notable differences from existing ideas and probably enough to turn into a new paper
- 7.
8. Clearly novel - major differences from all existing ideas
- 9.
10. Very novel - very different from all existing ideas in a very interesting and clever way

10. Novelty Rationale: Short justification for your score. If you give a low score, you should specify similar related works. (Your rationale should be at least 2-3 sentences.)

11. Feasibility Score: How feasible it is to implement and execute this idea as a research project? Specifically, how feasible the idea is for a typical CS PhD student to execute within 1-2 months of time. You can assume that we have abundant OpenAI / Anthropic API access, but limited GPU compute.

1. Impossible: the idea doesn't make sense or the proposed experiments are flawed and cannot be implemented
- 2.
3. Very challenging: there are flaws in the proposed method or experiments, or the experiments require compute/human resources beyond any academic lab
- 4.
5. Moderately feasible: It can probably be executed within the given time frame but would require careful planning, efficient use of APIs or some advanced computational strategies to overcome the limited GPU resources, and would require some modifications to the original proposal to make it work
6. Feasible: Can be executed within the given constraints with some reasonable planning
- 7.
8. Highly Feasible: Straightforward to implement the idea and run all the experiments
- 9.
10. Easy: The whole proposed project can be quickly executed within a few days without requiring advanced technical skills

12. Feasibility Rationale: Short justification for your score. If you give a low score, you should specify what parts are difficult to execute and why. (Your rationale should be at least 2-3 sentences.)

13. Expected Effectiveness Score: How likely the proposed idea is going to work well (e.g., better than existing baselines).

1. Extremely Unlikely: The idea has major flaws and definitely won't work well
- 2.
3. Low Effectiveness: The idea might work in some special scenarios but you don't expect it to work in general
- 4.
5. Somewhat ineffective: There might be some chance that the proposed idea can work better than existing baselines but the improvement will be marginal or inconsistent
6. Somewhat effective: There is a decent chance that the proposed idea can beat existing baselines by moderate margins on a few benchmarks
- 7.
8. Probably Effective: The idea should offer some significant improvement over current methods on the relevant benchmarks
- 9.
10. Definitely Effective: You are very confident that the proposed idea will outperform existing methods by significant margins on many benchmarks

14. Expected Effectiveness Rationale: Short justification for your score. (Your rationale should be at least 2-3 sentences.)

15. Excitement Score: How exciting and impactful this idea would be if executed as a full project. Would the idea change the field and be very influential.

1. Poor: You cannot identify the contributions of this idea, or it's not interesting at all and you would fight to have it rejected at any major AI conference
- 2.
3. Mediocre: this idea makes marginal contributions and is very incremental
- 4.
5. Leaning negative: it has interesting bits but overall not exciting enough
6. Leaning positive: exciting enough to be accepted at a major AI conference, but still has some weaknesses or somewhat incremental
- 7.
8. Exciting: would deepen the community's understanding or make major progress in this research direction
- 9.
10. Transformative: would change the research field profoundly and worth a best paper award at major AI conferences

16. Excitement Rationale: Short justification for your score. (Your rationale should be at least 2-3 sentences.)

17. Overall Score: Overall score: Apart from the above, you should also give an overall score for the idea on a scale of 1 - 10 as defined below (Major AI conferences in the descriptions below refer to top-tier NLP/AI conferences such as *ACL, COLM, NeurIPS, ICLR, and ICML.):

1. Critically flawed, trivial, or wrong, would be a waste of students' time to work on it
2. Strong rejection for major AI conferences
3. Clear rejection for major AI conferences
4. Ok but not good enough, rejection for major AI conferences
5. Decent idea but has some weaknesses or not exciting enough, marginally below the acceptance threshold of major AI conferences
6. Marginally above the acceptance threshold of major AI conferences
7. Good idea, would be accepted by major AI conferences
8. Top 50% of all published ideas on this topic at major AI conferences, clear accept
9. Top 15% of all published ideas on this topic at major AI conferences, strong accept
10. Top 5% of all published ideas on this topic at major AI conferences, will be a seminal paper

18. Overall Rationale: You should also provide a rationale for your overall score. (Your rationale should be at least 2-3 sentences.)

19. Confidence: Additionally, we ask for your confidence in your review on a scale of 1 to 5 defined as following:

1. Your evaluation is an educated guess
2. You are willing to defend the evaluation, but it is quite likely that you did not understand central parts of the paper
3. You are fairly confident that the evaluation is correct
4. You are confident but not absolutely certain that the evaluation is correct
5. You are absolutely certain that the evaluation is correct and very familiar with the relevant literature

20. Time: How many minutes did you spend on this task?
